Supported on:

At least Windows Vista

Options:

Help:

This policy setting prohibits access to Windows Connect Now (WCN) wizards.

If you enable this policy setting, the wizards are turned off and users have no access to any of the wizard tasks. All the configuration related tasks, including "Set up a wireless router or access point" and "Add a wireless device" are disabled.

If you disable or do not configure this policy setting, users can access the wizard tasks, including "Set up a wireless router or access point" and "Add a wireless device." The default for this policy setting allows users to access all WCN wizards.

Help:

Determines whether users can enable/disable LAN connections.

If you enable this setting, the Enable and Disable options for LAN connections are available to users (including nonadministrators). Users can enable/disable a LAN connection by double-clicking the icon representing the connection, by right-clicking it, or by using the File menu.

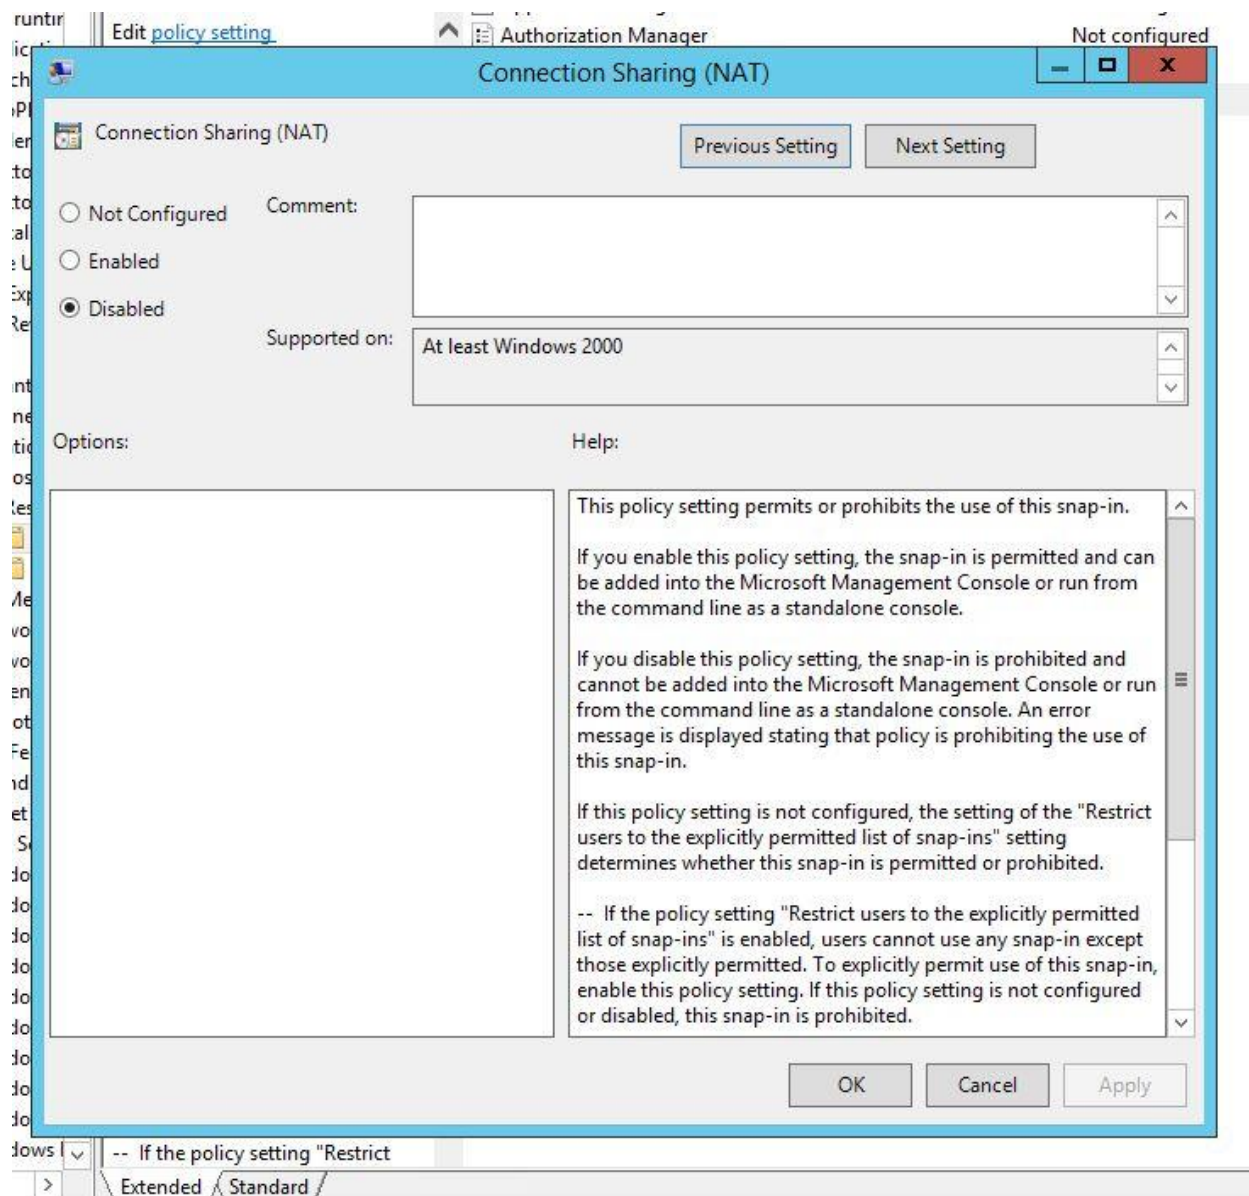

If you disable this setting (and enable the "Enable Network Connections settings for Administrators" setting), double-clicking the icon has no effect, and the Enable and Disable menu items are disabled for all users (including administrators).

Important: If the "Enable Network Connections settings for Administrators" is disabled or not configured, this setting will not apply to administrators on post-Windows 2000 computers.

If you do not configure this setting, only Administrators and Network Configuration Operators can enable/disable LAN connections.

Options:

Help:

This policy setting permits or prohibits the use of this snap-in.

If you enable this policy setting, the snap-in is permitted and can be added into the Microsoft Management Console or run from the command line as a standalone console.

If you disable this policy setting, the snap-in is prohibited and cannot be added into the Microsoft Management Console or run from the command line as a standalone console. An error message is displayed stating that policy is prohibiting the use of this snap-in.

If this policy setting is not configured, the setting of the "Restrict users to the explicitly permitted list of snap-ins" setting determines whether this snap-in is permitted or prohibited.

-- If the policy setting "Restrict users to the explicitly permitted list of snap-ins" is enabled, users cannot use any snap-in except those explicitly permitted. To explicitly permit use of this snap-in, enable this policy setting. If this policy setting is not configured or disabled, this snap-in is prohibited.
